### PROJECT LOCATION & SITE DESCRIPTION

<table>
<thead>
<tr>
<th>Project Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Naft Khana - Mindili road is 42.5 km long located in Diyala governorate North East of Iraq. The project site is located within a rural area which is very sparsely populated. The nearest human settlement is a small town called Naft Khana located about 2.5 km from the project site.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Project Description</th>
</tr>
</thead>
</table>
| Although the road is classified as a secondary road with two lanes single carriageway, it is considered vital since it connects the northern parts of Diyala governorate to its central and southern parts.  

The length of the road that needs maintenance is about 42.5 Km with a 7.5 meters wide with an average of 2 meter shoulders for opposite road sides stabilized with granular material. This road complements the road from Khanaqin – Naft Khana (Other EODP project that has 20Km in length) to be connected with Mindili City.  

The road passes through a rolling area and valleys near Iraq-Iran borders. The alternative road for this project will be Imam Ways – Khanaqin road. The alternative road is paved and passes through a semi-arid area therefore no land acquisition or involuntary resettlement of residents or businesses is anticipated. |
<table>
<thead>
<tr>
<th><strong>Site Google Map</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Google Map" /></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Current Road Condition</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Most of the road is totally distressed, damaged and suffers from rutting and cracks. Rutting occurs to the depth of 2-10 cm on outer lane under truck wheels. The depth of the rutting exceeds 10 cm in some parts of the road and sometimes reaches 18-20 cm especially at the location of army check points. Also, there are longitudinal and transverse cracks measuring 0.5-5 cm wide. In addition, there are evidence of shoving and depressions at different parts of carriageway in particular on pavement areas traversing drainage structures. Moreover, most of the culverts are blocked either by sedimentation or debris.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Alternative Route</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>During the rehabilitation stage, road traffic will utilize the Imam Ways - Khanaqin road as an alternative route. The alternative road is paved and passes through a semi-arid area without any requirements for land acquisition or involuntary resettlement of residents or businesses.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Project Duration</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>According to the contract agreement, the expected project duration is about 365 days.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Proposed Project Activities</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>The project rehabilitation activities will include:</td>
</tr>
<tr>
<td>(i) Cold milling and demolishing of damaged asphalt layers to the entire length of the road;</td>
</tr>
<tr>
<td>(ii) Construction of a compacted subbase layer 30 cm thick;</td>
</tr>
<tr>
<td>(iii) Overlay by new layers, base course 10 cm and then binder course of 7 cm;</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>---</td>
</tr>
<tr>
<td>(iv) Construct subbase for shoulders 15cm thick and leveling the existing shoulder and filling with suitable fill material over the subgrade and beneath the shoulder subbase; (v) Remove debris and unsuitable materials and reshape the side slope by trimming &amp; leveling in addition to the culverts cleaning. For the purpose of treatment the areas which are closer to the security check points (200m long) in station (7+400), it is required to replace the existing asphalt pavement by a rigid pavement.</td>
</tr>
<tr>
<td><strong>Land Acquisition</strong></td>
</tr>
<tr>
<td><strong>Contactor’s Camp</strong></td>
</tr>
</tbody>
</table>

**PROJECT BASELIN CONDITIONS**

**Description of Geographic Conditions**

**Geography:**
The project area is located within a predominantly rural area with landscape features like mountains, cliffs, and valleys.

**Physical environment:**
Except for the normal road traffic, no sources for air pollution exist near the project site. The values of air parameters are considered within natural levels compared to Iraqi standards. Similarly, noise levels near the project site are considered below the maximum allowable limits due to the absence of any noise sources except for regular traffic. The nearest human settlement to the project site is 2.5 km. Air quality and noise near these settlements will not be negatively affected by the project.

**Description of Physical Conditions**
| Description of Geological Conditions | **Geology:**  
The area surrounding the road section represents a joining area of the flat areas that start from the middle of Iraq till the mid-southern parts of the country and some of mountains, cliffs, and valleys. |
| Description of Hydrogeology Conditions | **Hydrogeology:**  
There are some canals that cross the road and these canals conveys the water from the mountains during the spring season. Flooding of the road has not been reported in the past years. The depth of ground water in the area ranges from 6 to 96 meters. In general, the groundwater near the project area is not used for human consumption or irrigation. |
| Description of Ecology Conditions | **Ecology:**  
The project area is located in an arid and semi-arid ecosystem. No protected areas are located within the project site. No wildlife has been recorded. The exiting flora and fauna species are abundant in Iraq and are not classified as rare or endangered. |
| Description of Socio-Economic Context | **Socio-economy:**  
The nearest human settlement to the project site is Naft Khana settlement about 2.5Km away. The community has a population of (2,000) capita. 
The settlement may serve the project as a source for temporary unskilled daily labor, food supply and providing basic maintenance for some construction equipment. 
Along the road section which will be rehabilitated, there are no roadside vendors, either licensed or non-licensed who would need to be displaced as a result of rehabilitation/construction activities. |
| Source and Distance of Material Especially Aggregates, Water | The required construction materials are: Aggregates, gravel, asphalt, diesel fuel (for construction equipment) and water. 
The construction material will be transported by trucks from the quarries which are located in Imam Ways, about 70km away from site. These quarries are already commercially operating enterprises and serve other ongoing projects. The trucks will use the existing road (Naft Khana -Mindili) to reach the site. |
The fresh water will be provided by trucks from the Village of Naft Khana or from Mindili and will be stored on site in above ground plastic containers.

Drinking water will be provided to workers and engineers via bottled water which will be provided by a local supplier from Naft Khana or Mindili City or even from Khanaqin City.

### LEGISLATION & POLICIES

<table>
<thead>
<tr>
<th>National &amp; Local Legislation and World Bank Policies that Apply to the Project</th>
</tr>
</thead>
</table>
| The main local legislation which will be applicable is Law no. 27 of 2009 for: Protection and Improvement of Environment. Also, Law no. 37 of 2008 for Ministry of Environment: Describes institutional arrangements of the Ministry of Environment and Outlines policies and roles and responsibilities toward protecting the environment. Moreover, Regulations no. 2 of 2001 for: Preserving water resources. (See Annex 1 for details on applicable Iraqi laws to this project).
| Other relevant World Bank Operational laws and Policies such as Environmental Assessment OP/BP 4.01 will also be applied.
| OP 4.12 does not apply in this specific project because rehabilitation will be confined to existing road and no involuntary resettlement is expected. |

### PUBLIC CONSULTATION

<table>
<thead>
<tr>
<th>Public Consultation Process</th>
</tr>
</thead>
</table>
| Due to the current security situation of the area and taking into utmost consideration the safety of people as public meetings may be targeted by terrorists, individual interviews with the local people were conducted. It should be mentioned that no women interviews were conducted because they are located far away from the project site. In addition, the road users are mostly transport for commercial purposes and it’s rare to find women using taxis or buses on this road.
| These interviews took place with dwellers of the Villages (Kani Masi and Belqana) and road drivers. Five dwellers and 5 road users were interviewed in the date of 21\textsuperscript{st} of April 2016. This draft Checklist was also posted on the Website of the Roads and Bridges Directorate for public knowledge and opportunity for comments and feedback.
| A set of questions were prepared to cover the key environmental and social aspects related to the project. Local residents were consulted using face-to-face interviews with randomly selected individuals in the vicinity of the road and in different areas of the community to have their opinions and thoughts. |
The purpose of the consultation was to obtain sound and representative information on the possible socio-economic circumstances of the local community members, and better understand any possible adverse socio-economic effects of project activities on PAPs and the local community.

According to the results revealed from these questioners, the local community individuals agreed that, the rehabilitation activities will have a positive impact on their social daily life. None of the locals expressed any reservations against the project and did not specify any negative impact that might affect him or his family (see Annex 3).

No environmental or social concerns were raised by the interviewed. However, they required adequate road signs and safety instructions to be in place to avoid road accidents during road repair and later during road operation.

All interviewed persons expressed their demand to complete the road maintenance and repair as soon as possible to improve their livelihood conditions. “See evidence of consultations in Annex 3”

</tbody>
</table>

1. Land acquisitions includes displacement of people, change of livelihood encroachment on private property this is to land that is purchased/transferred and affects people who are living and/or squatters and/or operate a business (kiosks) on land that is being acquired.

2. Toxic / hazardous material includes, but is not limited to, asbestos, toxic paints, noxious solvents, removal of lead paint, etc.
## PART C: MITIGATION MEASURES

<table>
<thead>
<tr>
<th>ACTIVITY</th>
<th>PARAMETER</th>
<th>MITIGATION MEASURES CHECKLIST</th>
</tr>
</thead>
</table>
| General Conditions | Notification and Worker Safety (See Annex 2 for detailed measures on Health and Safety) | a) The local construction and environment inspectorates and communities have been notified of upcoming activities  
b) The public has been notified of the works through appropriate notification in the media and/or at publicly accessible sites (including the site of the works)  
c) All legally required permits have been acquired for rehabilitation  
d) The Contractor formally agrees that all work will be carried out in a safe and disciplined manner designed to minimize impacts on neighboring residents and environment.  
e) Workers' PPE will comply with international good practice (always hardhats, as needed masks and safety glasses, harnesses and safety boots)  
f) Appropriate signposting of the sites will inform workers of key rules and regulations to follow. |
| A. General Rehabilitation and/or Construction Activities | Air Quality | (a) During excavation works dust control measures shall be employed, e.g. by spraying and moistening the ground  
(b) Demolition debris, excavated soil and aggregates shall be kept in controlled area and sprayed with water mist to reduce debris dust  
(c) During pneumatic drilling or breaking of pavement dust shall be suppressed by ongoing water spraying  
(d) The surrounding environment (sidewalks, roads) shall be kept free of soil and debris to minimize dust  
(e) There will be no open burning of construction / waste material at the site  
(f) All machinery will comply with Iraq emission regulations, shall be well maintained and serviced and there will be no excessive idling of construction vehicles at sites |
| | Noise | (a) Construction noise will be limited to restricted times agreed to in the permit  
(b) During operations the engine covers of generators, air compressors and other powered mechanical equipment shall be closed, and equipment placed as far away from residential areas as possible |
| | Water Quality | (a) Sewage from construction offices and rest areas will be collected and transferred by trucks to the nearest sewage treatment plant |
| | Waste management | (a) Waste collection and disposal pathways and sites will be identified for all major waste types expected from excavation, demolition and construction activities.  
(b) Construction and demolition wastes will be separated from general refuse, organic, liquid and chemical wastes by on-site sorting and stored in appropriate containers  
(c) Construction waste will be collected and disposed properly by licensed collectors  
(d) The records of waste disposal will be maintained as proof for proper management as designed. |
<table>
<thead>
<tr>
<th>ACTIVITY</th>
<th>PARAMETER</th>
<th>MITIGATION MEASURES CHECKLIST</th>
</tr>
</thead>
</table>
| **B. Toxic materials**   | Toxic / hazardous waste management                                         | (a) Temporarily storage on site of all hazardous or toxic substances will be in safe containers labeled with details of composition, properties and handling information  
(b) The containers of hazardous substances shall be placed in an leak-proof container to prevent spillage  
(c) The wastes shall be transported by specially licensed carriers and disposed in a licensed facility.  
(d) Paints with toxic ingredients or solvents or lead-based paints will not be used |
| **C Traffic and pedestrian safety** | Direct or indirect hazards to public traffic and pedestrians by construction activities | (a) In compliance with national regulations the Contractor will ensure that the construction site is properly secured and construction related traffic regulated.  
(b) The site will be clearly visible and the public warned of all potential hazards by signposting and barriers / fencing  
(c) Traffic management system and staff training, especially for site access and near-site heavy traffic. Provision of safe passages and crossings for pedestrians where construction traffic interferes.  
(d) Adjustment of working hours to local traffic patterns, e.g. avoiding major transport activities during rush hours or times of livestock movement  
(e) If required, active traffic management by trained and visible staff at the site for safe passage for the public  
(f) Ensuring safe and continuous access to all adjacent office facilities, shops and residences during construction |
## Table (1) Summary of ESMP during Maintenance Phase

<table>

**Expected additional mitigation costs:** USD 15,000  
**Expected monitoring costs:** USD 20,000
Annex 1:

Iraqi legal and regulatory framework

- **Iraqi environmental legislations.**
  The work during rehabilitation and operation must follow the Iraqi laws and regulations for the environmental standards. These are:
  - Laws of the environment protection No.3 issued in 1997 and the published regulations. No environmental regulations for gaseous emissions, noise and other air pollution standards are in force and legally binding. However, limits for water disposal in any surface waters and main sewers are regulated according to the regulations no. (25)/1967 and their update modifications released from the ministry of health and the ministry of the environment.
  - Regulations of the MOE on sanitary waste must be followed, and for the rubbles (construction & demolition waste) the regulations, legislations and instruction of both MOHE and MOCHPM.
  Table (10) represents the applicable Iraqi’s laws applicable to such activity.

### Table C: Applicable Laws and Regulations in Iraq

<table>
<thead>
<tr>
<th>Applicable Iraqi laws</th>
</tr>
</thead>
<tbody>
<tr>
<td>Law no. 37 of 2008 for Ministry of Environment: Describes institutional arrangements of the Ministry of Environment and Outlines policies and roles and responsibilities toward protecting the environment.</td>
</tr>
<tr>
<td>Regulations no. 2 of 2001 for: Preserving water resources.</td>
</tr>
<tr>
<td>Law no. 27 of 2009 for: Protection and Improvement of Environment</td>
</tr>
</tbody>
</table>

For legal aspects, the work during rehabilitation and operation must follow the Iraqi laws and regulations for the Environmental Standards. These are laws of the environment protection No.3 issued in 1997 and the published regulations. No environmental regulations for gaseous emissions, noise and other air pollution standards are in force and legally binding. However, limits for water disposal in any surface waters and main sewers are regulated according to the regulations no. (25)/1967 and their update modifications released from the ministry of health and the environment. Law of heritage and antiques no. (55) Issued in 2002, while for a sanitary waste (municipal) the regulations of the MOHE must be followed, and for the rubbles (construction & demolition waste) the regulations, legislations and instruction of both MOHE and MOCHPM must be followed.
It should be noted that legislation relating to social safeguards issued in Iraq since 2003 has focused primarily on the ratification of international conventions and protocols on issues such as cultural heritage. As yet there are no formally adopted requirements for social assessments relating to road works. Hence, social safeguards issues remain very largely uncovered except to the extent they are referred to under environmental laws.

The World Bank Safeguards Policies

The World Bank has many operational safeguard policies which apply to various development projects which the Bank is either implementing or funding. The purpose of these policies is to ensure that social and environmental risks are prevented or at least minimized while increasing socio-economic benefits of approved projects in addition to preserving the environment. These policies have been a means to increase the effectiveness and positive impacts of development projects and programs supported by the Bank.

The Bank’s safeguard policies included within the project are listed in table (11):

<table>
<thead>
<tr>
<th>Table 11: World Bank Operational Policy</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Operational Policies (OP)</strong></td>
</tr>
<tr>
<td>• OP/BP 4.01 Environmental Assessment</td>
</tr>
<tr>
<td><strong>Social Policies</strong></td>
</tr>
<tr>
<td>• OP/BP 4.12 Involuntary Resettlement</td>
</tr>
</tbody>
</table>

1. **OP/BP 4.01** - the key Operational Policy describing the environmental assessment procedure. The Bank requires environmental assessment of projects proposed for Bank financing. The objectives of the EA are to:
   a. Ensure that projects proposed for Bank financing are environmentally and socially sound and sustainable.
   b. Inform decision makers of the nature of environmental and social risks.
   c. Increase transparency and participation of stakeholders in the decision-making process.
2. **OP/BP4.12** the key Operational Policy describing the involuntary resettlement which focuses on the following principles:

1. Involuntary resettlement is avoided wherever feasible, or minimized, exploring all viable alternative project designs;

2. Where it is not feasible to avoid involuntary resettlement, activities are conceived and executed as sustainable development programs. Displaced persons are to be meaningfully consulted and have opportunities to participate in the planning and implementing of resettlement programs affecting them; and

3. Displaced persons are assisted in their efforts to improve their livelihoods and standards of living, or at least to restore them, in real terms, to pre-displacement levels or to levels prevailing prior to the beginning of project implementation, whichever is higher. The mechanism of assisting displaced persons is based on full and prior mitigation and compensation for loss of assets or livelihoods.

4. OP 4.12 applies whenever, in a Bank-financed project, land is acquired involuntarily or access is restricted in legally designated parks or protected areas.

5. However, in this specific project, OP 4.12 will not be applied for the repair and rehabilitation of this bridge as all repair and rehabilitation activities will be within the existing footprint and no additional land acquisition is needed either permanently or temporarily.

**Grievance Redress Mechanism**

Bank procedures require that Grievance Redress Mechanisms (GRMs) be established and operational prior to commencement of the project, and that they continue to operate for one year following completion of the works for third party settlement of disputes arising from resettlement. This GRM should take into account the availability of judicial recourse as well as traditional and community dispute resolution mechanisms.

Accordingly, a GRM will be established at the project level to ensure any grievance can be addressed in an amicable manner. Resolving complaints at community level is always encouraged to address the problem that a person may during implementation and/or operational phase.
The project grievance redressed system should be developed in consultation with communities, which might include the following for written complaints:

1. First, the affected person sends his/her grievance in writing to the communities/community leaders. The grievance note should be signed and dated by the aggrieved person. Where the affected person is unable to write, s/he should obtain assistance from the community to write the note and mark the letter with his/her thumbprint. The community should respond within 14 days.

2. Second, if the aggrieved person does not receive a response or is not satisfied with the solution provided by the community, s/he lodges her or his grievance to PMT which should respond within 14 days.

3. Third, if the aggrieved person does not satisfied with the solution of PMT, s/he can go to the court.

In any case, the PMT must maintain records of grievances and complaints, including minutes of discussions, recommendations and resolutions made.
Location (using Google earth)
Annex 2: Occupational Health's' and Safety

The objectives of occupational health and safety (OHS) procedures plan that should be applied for the project are to:

1. Develop, in the workplace, a collaborative approach to managing Occupational health and Safety between management and workers.
2. Provide and maintain safe working procedures and operations.
3. Ensure awareness of all potential work related risks and hazards and to develop preventive strategies against these risks and hazard.
4. Provide appropriate training to all concerned to work safely and effectively.
5. Maintain a constant and continuing interest in the improvement of occupational health and safety performance and to provide the required resources necessary for the implementation and maintenance of the OHS plan.

For the projects of the Rehabilitation of Civil Works Project, the occupational health and safety primarily focuses on work equipment and protective gear. The following section provides guidelines for work equipment, and safety and health signs.

Safety Guidelines for Work Equipment

It is the Contractor's obligation that every possible measure is taken to ensure the safety of the work equipment made available to workers. During the selection of the work equipment the employer shall pay attention to the specific working conditions, which exist at the workplace, especially in relation to safety and health of workers. A brief list of work equipment safety issues is given below:

1. Work equipment control devices which affect safety must be clearly visible and identifiable and appropriately marked where necessary.
2. Work equipment presenting hazards due to emissions of gas, vapor, liquid or dust must be fitted with appropriate containment and/or extraction devices near the sources of the hazard.
3. Where there is a risk of mechanical contact with moving parts of work equipment, which could lead to accidents, those parts must be provided with guards or devices to prevent access to danger zones or to halt movements of dangerous parts before the danger zones are reached.
4. Work equipment may be used only for operations and under conditions for which it is appropriate.
5. Work equipment must bear the warnings and markings essential to ensure the safety of workers.
6. All work equipment must be appropriate for protecting workers against the risk of the work equipment catching fire or overheating, or of discharges of gas, dust, liquid, vapor or other substances produced, used or stored in the work equipment.
7. All work equipment must be appropriate for preventing the risk of explosion of the work equipment or of substances produced, used or stored in the work equipment.
8. All work equipment must be appropriate for protecting exposed workers against the risk of direct or indirect contact with electricity.
9. Mobile work equipment such as Bulldozer or Road Rollers with ride-on workers must be designed to restrict, under actual conditions of use, the risks arising from work equipment roll-over.
10. Fork-lift trucks carrying one or more workers must be adapted or equipped to limit the risk of the fork-lift truck overturning.
11. Self-propelled work equipment, such as percussion drills, which may, when in motion, engender risks for persons must have facilities for unauthorized start-up.

12. Machinery for lifting loads, such as Crane, must be clearly marked to indicate its nominal load, and must where appropriate be fitted with a load plate giving the nominal load for each configuration of the machinery.

13. Work equipment must be erected or dismantled under safe conditions, in particular observing any instructions, which may have been furnished by the manufacturer.

14. First aid facilities must be available on site at all times.

15. All equipment is maintained in a safe operating condition.

16. Personal Protective Equipment (PPE) available for all construction staff. Helmets and safety shoes must be worn at all times and other PPE worn where necessary i.e. dust masks, ear plugs etc.

17. Adequate warning signs of hazardous working areas.

18. Emergency numbers for local police and fire department will be placed in a prominent area.

19. Firefighting equipment will be placed in prominent positions across the site where it is easily accessible. This includes fire extinguishers, a fire blanket as well as a water tank.

20. No open fires will be allowed on site.
Annex 3: Consultation with the Public

1. هل تعتقد أن عملية إعادة بناء الجسر / الطريق له أثر إيجابي في الناحية الاجتماعية على السكان القاطنين في المحيط المجاور للجسر / الطريق؟
   نعم              كلا

2. هل هناك ادعاءات أو مطالبات من قبل السكان المحليين بانتقادات الأراضي المقدمة عليها الجسر / الطريق؟
   نعم              كلا

3. بسبب أعمال إعادة بناء الجسر / الطريق هل تمت صيانة أزالة للمحايل زراعية أو أشجار أو أي عطاء نباتي تعود عائشة إلى المواطنين أو السكان المحليين؟
   نعم              كلا

4. هل تضررت مصالح المواطنين القاطنين بالقرب من الجسر / الطريق بسبب أعمال إعادة بناء؟
   نعم              كلا

5. هل هناك أي مخاطر مؤقتة أو دامجة تلعب دوراً أساسياً في النشاطات البيئية اليومية للسكان ستأثر بعملية تأهيل الجسر / الطريق؟
   نعم              كلا

6. هل ان أعمال إعادة أعمال الجسر / الطريق تستجيب بأجراءات إعادة توطين لأشخاص (والآخرين) لأشخاص
   إلى مناطق جديدة؟
   نعم              كلا

7. هل تم استخدام منطقة بناء الجسر / الطريق بطريقة ما من قبل السكان المحليين. علماً أن الأرض مخصصة للدولة؟
   نعم              كلا

8. هل تتوقع وجود تأثيرات اجتماعيات سلبية بالنسبة نتيجة أعمال إعادة التأهيل؟
   نعم              كلا
س: هل هناك تغييرات دينوغرافية أو ضرر في النسيج الاجتماعي من جراء أعمال إعادة التأهيل؟
نعم
كلا

س: ما هي المجموعات الأكثر ضعفاً وهشاشة التي من المحتمل أن تتأثر بعمليات إعادة الإعمار؟
نعم
كلا

س: هل سيزعج المشروع عمليات القتل وقتل من العائلات الموجودة بالقرب من منطقة الجسر / الطريق؟
نعم
كلا

س: هل يحتاج المواطنون المقيمون بالقرب من الجسر / الطريق إلى وضع إعلانات تحذيرية أو استدلالية لزيادة معدلات الأمن و السلم؟
نعم
كلا

1: هل تعتبر عملية إعادة بناء الجسر / الطريق له أنواع إيجابية من الناحية الاجتماعية أو السكانية في المنطقة المحيدة بالجسر / الطريق؟
نعم
كلا

2: هل هناك إعاءات أو مطالبات من قبل السكان المحليين بخصوص الأرض المقام عليها الجسر / الطريق؟
نعم
كلا

3: بسبب أعمال إعادة بناء الجسر / الطريق هل تم إلغاء نهاية الحياة للمضافات الزراعية أو الإشجار أو أي غطاء طبيعي تعود عائديه للمواطنين أو السكان المحليين؟
نعم
كلا

4: هل تضررت مصالح المواطنين القاطنين بالقرب من الجسر / الطريق بسبب أعمال إعادة البناء؟
نعم
كلا

5: هل هناك أي نزاعات أو دعوات تلعب دوراً أساسيًا في التشنجات البدنية اليومية للسكان ستأثر بإعادة تأهيل الجسر / الطريق؟
نعم
كلا

6: هل يمكن أن تكون الجسر / الطريق متضمنًا بإجراءات إعادة تأهيل للمشتر ( وأنشأها) لأشخاص?
نعم
كلا

7: هل يتضمن استخدام منطقة بناء الجسر / الطريق بطريقة ما من قبل السكان المحليين، علماً أن الأرض مملوكة للدولة؟
نعم
كلا

8: هل تتوقع وجود تأثيرات إجتماعية سلبية بالمنطقة نتيجة أعمال إعادة التأهيل، إذاً؟
نعم
كلا
س: هل هناك تغييرات دموغرافية أو ضرر في الجماع الاجتماعي من جراء أعمال إعادة التأهيل؟

نعم

كلا

س: ما هي المجتمعات الأكثر ضرراً وهشاشة التي من المحتمل أن تتأثر بأعمال إعادة الإعمار؟

نعم

كلا

س: هل سيتم تحسين المشروع من خلال الأقل وليس من الجماعات الموجودة بالقرب من منطقة الجسر / الطريق؟

نعم

كلا

س: هل يحتاج المواطنون المقيمون بالقرب من الجسر / الطريق إلى وضع إعلانات تحذيرية أو استدلالية لزيادة معدلات الأمن والامان في استخدام الجسر / الطريق؟

نعم

كلا
